

Release Notes

DynaVox Compass Software, Version 1.4

This document summarizes the new features and enhancements associated with the release of version 1.4 of the DynaVox Compass Software for the DynaVox T10 device.

New Features and Enhancements

The 1.4 release of the DynaVox Compass software features a Modify button, which provides a simple way for the user to quickly customize any object on the active page. Modify also provides the user a fast way to customize the Toolbar and Navbar.

Modify is the default edit mode, but full Edit mode is still available and may be reached in two new ways:

- From the **Editor** button on the *Settings* menu.
- By adding an **Editor** button to the Toolbar.

As in prior releases, full Edit mode is opened when creating a new page in *Page Browser* and *Page Creator*.
